

...and or, at the discretion of the agents working the case.

... incident points up two issues at the least. Each is critical; together they represent a near crisis. The first is a lack of cooperation among U.S. law enforcement agencies and intelligence agencies that, at times, verges on murder. The second issue is that of hate groups, and what they portend. Admittedly I did not see the entrance of the rogue officers into the training camp. Obviously I have taken a certain amount of literary license in describing some of their thoughts and actions, based on debriefings. But I have little doubt events happened in much the way described. I certainly have no doubt how deadly serious this issue was. If anyone doubts the potential danger that resulted from this clandestine session, if anyone doubts the dangers faced by officers who were purposely kept ignorant of the fact that this training had been given, all they have to do is read the text of the training guide used at the White Supremacist gathering in Idaho. The document leaves little to the imagination:

***** TRAINING SEMINAR, DEC. 1986** Topics to be covered Killing police officers during routine traffic stops. Bank and armored car robbery tactics. Weaponry that Aryan Nations Members are encouraged to have and use. Recent FBI/ZOG operations against the movement.

OPERATIONAL CONSIDERATIONS All members should purchase and wear body armor when conducting operations. Armor with side panels and ceramic inserts is preferred. Do not worry about wearing a vest on the outside of your clothing. The police are trained to shoot at the center of the body mass and will do so automatically in a gun battle. The Movement now has access to European body armor that can withstand multiple hits of rifle and rifle slug projectiles.

Obtain C.B. radios and have them installed in your vehicle glove box. If you are on your way to or from an operation and are stopped by the police, advise the back up vehicle by C.B. Turn off your radio and shut the glove box. Scanners that can pick up the police radio transmissions can be bought and installed in each car.

All members should start learning how to build bombs and keep them available.

If your car is identified as being used in a robbery, sell it at once to a car lot that buys vehicles for cash. The police do not watch these lots.

After a robbery shave your beard and cut your hair. Change your clothing and put on a business suit. Transfer any funds into your family car and drive to a preselected motel near the crime scene. Plan to stay a few days.

→ KILLING POLICE OFFICERS DURING ROUTINE TRAFFIC STOPS ←

Travel in groups of at least two vehicles. The first vehicle should contain the robbery/operational team. The back up vehicle should look like a family car and have a man and a woman in the front seats.

When stopped you will have 3-5 minutes to make up your mind to kill the officer before his/her back up arrives on the scene. Monitor your scanners.

The primary duty of killing the officer rests with the second vehicle occupants.

TECHNIQUE ONE: When the first car is stopped, the back up vehicle should turn off its lights and coast to a stop behind the patrol car. The shooters should exit their vehicle quietly. Walk to the passenger side of the patrol car and shoot the officer once in the torso and once in the head.

DE TWO: After being stopped, the first driver should begin to argue with the officer and be aggressive to get his attention. The back up personnel should pull in behind the patrol car and exit the vehicle in a run. While running they should be yelling "Can we help you officer," or "Hold on officer, we can help." The officer will switch his attention back to the first subject, thinking the "citizens" are there to render assistance. The officer should be shot at point blank range, once in the torso and once in the head.

WEAPONRY

Invest only in high quality firearms.

Purchase from ads in newspapers and from individuals at swap meets. Do not buy guns at gun stores.

Obtain weapons that use commonly found ammunition.

Hunting rifles with scopes are useful for long range use or assassinations.

Semi-automatic rifles are good for counter-SWAT operations. Do not buy or convert these rifles into full auto. They waste too much ammo and are harder to control.

Buy large bore handguns and avoid cheap "Saturday night specials."

Semi-auto pistols should be loaded while wearing gloves. Load the magazines with penetrator/teflon/arcane/plus P or Glaser Safety Slug bullets. Purchase 12 gauge shotguns with pump or semi-automatic actions. Do not cut the barrels. Order short legal riot or deer barrels. Carry #4 Buckshot as slugs or 00 shot require too much accuracy. ***

This is what the police taught at the training facility. The information was not distributed by the feds for "fear of unsettling" the local and state police. Maybe. I believe the word wasn't passed on so the various "Aryan" cops wouldn't know an informant was in the crowd and possible compromise an on-going investigation. Yet after the case surfaced, and the issue of secrecy was moot, the info still wasn't given out because it might "upset the public."

You bet it would—and should. This information was taught to dozens of white supremacists, most of whom are still free, white and loose throughout the U.S. and Canada.

An interview with one of the officers involved - he was "asked to leave" by his agency - showed he did not think of himself as a racist - at least in the sense of believing in racial or ethnic superiority. Rather, he was mad at the government for what he saw a preferential treatment of minorities over other citizens. He said he had seen minorities pass through the police academy when a "white" cadet would have been booted out for the same performance. He was angry at what he said was inequality, the right of blacks to have their own all-black unions, colleges and even beauty contests. He said that anyone trying to stage an all-white beauty contest would be called racist, but that he felt blacks could do it and the court would side with them. White extremists get put on trial, but ethnic or religious extremists are allowed to hold rallies in major cities, he said. It is such perceived inequities that help in the recruitment of members to extremist movements.

The true story indicates just how the police and intelligence community has been infiltrated in the past. There is no reason to believe the past isn't prologue. For that reason, an on-going counterintelligence program must be stressed to all officers. Top management of a department - in addition to all of its other problems - has to consider the damage that rogues of all types can do to them and others. It also illustrates the need for better cooperation and communication among intelligence agencies, more willingness to share and an end to turf wars.

For police and security officers there is a clear message. Do not assume that the "other" guy is not as well-trained as you are. Do not assume your procedures are unknown to others. Always believe that

NUCLEAR WEAPONS

BUILDING AN A-BOMB (PT 1)

Uranium is the basic ingredient of the A-Bomb. There are two kinds of Uranium: the rare U-235, used in bombs, and the more common, heavier, but useless U-238. Natural uranium contains less than 1 percent U-235 and in order to be usable in bombs it has to be "enriched" to 90 percent U-235. Plutonium-239 can also be used in bombs as a substitute for U-235. Ten pounds of U-235 is all that is necessary for a bomb. Less than ten pounds won't give you a critical mass.

If you can't steal enriched uranium, you'll have to settle for unenriched or commercial grade (20 percent U-235). Unenriched uranium can be purchased at any chemical supply house for \$23/pound. Commercial grade (30 to 20 percent enriched) is available for \$40/pound from Gulf Atomic. Both types have to be enriched further yourself, and that starts with transforming the uranium into liquid form.

First pour a few gallons of concentrated hydrofluoric acid into your uranium oxide, converting it into uranium tetrafluoride. (Safety note: Concentrated hydrofluoric acid is so corrosive it can eat its way through

glass, so store it only in plastic.)

Now you convert the uranium tetrafluoride to uranium hexafluoride, the gaseous form of uranium, by bubbling fluorine gas through your container of uranium tetrafluoride. Fluorine is available in pressurized tanks from chemical supply firms. Be careful with it though, because fluorine is several times as deadly as chlorine, the classic WWI poison gas. Using a stove hood is probably a good idea.

If you've done the chemistry right you should now have a generous supply of uranium hexafluoride ready for enriching. In the old horse and buggy days of nuclear science, enrichment was carried out using hundreds of miles of pipes, tubes, and membranes. This gaseous diffusion process, as it is called, is difficult, time-consuming, and expensive. Forget it — there are easier and cheaper ways of enriching your uranium.

First transform the gas into a liquid by subjecting it to pressure. You can do this with a bicycle pump. Then make a simple home centrifuge. Fill a standard size bucket one quarter full of uranium hexafluoride. Attach a six foot rope to the bucket handle. Now swing the bucket and rope around your head as fast as possible for about 45 minutes. Slow down gradually, and gently place the bucket on the floor.

The U-235, which is lighter, should have risen to the top, where it can be skimmed off like cream. Repeat this step until you have the requisite 10 pounds of uranium. (Safety note: Don't put all your uranium hexafluoride in one bucket, as critical mass may inadvertently develop.)

Now it's time to convert your enriched uranium back to metal form. This is easily accomplished using several ladles of calcium spooned into each bucket. The calcium reacts with the uranium hexafluoride to produce calcium fluoride, a colorless salt which can be easily separated from your pure enriched uranium metal.

A few precautions. Uranium is not particularly dangerous in the amounts you'll be handling. If you plan to make more than one bomb, it might be wise to wear gloves and a lead apron.

If you find yourself dozing off during the process, or if you begin to glow, it might be wise to take a blood count. Prick your finger with a sterile pin, put a drop of blood on a microscope slide, and examine it. If you have leukemia, immature blood cells are released into the bloodstream, and the number of white cells increases (though this can take up to two weeks.) Red blood cells look kind of like doughnuts without the hole, and are slightly smaller than white blood cells, each of which has a nucleus. Immature red cells look similar to white cells. If you have more than about one white cell to 400 red cells you may be in trouble.

Now you have the uranium, the next step to build a device where critical mass is achieved and the fission reaction is begun. Construction of the device will be covered in Part 2 of this series, to appear in the next issue of LIAP.

(Editor's note: Building nuclear weapons can be dangerous. We accept no responsibility for such acts.)

COP HUNTER

It's now officially regular, with at least two addresses per month. Please submit your local cops to us at our main address:

— City of Gaithersburg, Maryland: From 270 North take the Route 27 (Damascus) exit and head North on Route 27. Take Route 27 across 355, past Brink and onwards for three miles or so until you reach Cedar Grove Elementary School on your right. Two blocks past that, make a right and then make your second left onto Preakness. Make a right onto Santa Anita Way, and at your first left, Show Pony Court, on your left, in a blue house on the corner, lives a Gaithersburg City Cop.

— Montgomery County, Maryland: Follow Route 124 North wards Damascus and beyond Brink. On your right, about two miles later, one house up and across from the Amoco, lives a Montgomery County Cop with an alternating plain and marked car.

A NEW BREED OF SUSPECT

A recent robbery suspect was arrested after trying to kill his arresting officer. In the suspect car was a notebook labeled, "23 rules for winning shootouts with police."

The list included:

Park where the least detectable know your exits.
Recognize plainclothes cops Predict cop's movement to gun Choose locations police cannot easily surround.

If ambushed:

Use cover
Move to confuse

These "rules for survival" are very inclusive and cannot be labeled anything less than formal training. Whether he knows it or not, this suspect's list covers the following concepts:

Rules for engagement Lag time
Cover and concealment

This type of preparation should not surprise us, but remind us. Many of today's suspects are tactical thinking, some are military trained, they read police periodicals, they share information and practice.

In the last 18-24 months, we have seen a visible increase in suspect tactics. Body armor, radio communications and fully automatic weapons are an example of the type of equipment that has become more and more popular. The use of lay-off suspects, (crime partners posing as customers), has become common. When we engage a suspect, these silent crime partners will usually engage from behind, with deadly consequences. Last year, 55% of the officers killed were the victims of head-shots. This is partially because of a trend on the rise. Suspects are now more likely to execute a downed officer before leaving a crime scene.

Gang members have joined the armed forces only to gain the combat firearms and tactics training. After training, they take a dishonorable discharge and return home. When asked about their unfortunate discharge they proudly explain how they "infiltrated the military." There were 791 gang-related murders in Los Angeles County last year.

Most suspects we encounter are not this prepared. But what about the one who is? He's out there. He's in EVERYTOWN, USA. We have stopped him in the street and in his car.

Since 1990, over 100,000 officers have been assaulted. On the

average 10 cops a day are shot at. This year there have been too many cop funerals, all resulting from felonious killings. Over 50% were while attempting arrest and over 50% were caused by handguns at less than 10 feet. Many of these resulting from bad searches. Today's suspect is committed and has the mindset of a soldier going into battle. We are his enemy. He's ready for us. Let's be ready for him.

Stay Alert, Stay Alive, Stay Safe and KEEP the FAITH!
